

ULTRAVIOLET (UV-C) AIR PURIFICATION

An added level of protection for your employees and customers

The Cherokee Group's expert indoor air quality specialists can retrofit virtually any commercial (or even residential) heating/cooling system to include a UV-C air purification system ... *in as little as one hour!* The UV-C purifier will kill not only airborne virus particles, but also harmful bacteria, mold and fungi spores, and even pollen and other allergens.

By purifying the air before reaching the heating/cooling system, it will also prolong the efficiency and life of the unit. The Cherokee Group has a variety of options starting at \$599 installed.

Depending on the size of your HVAC system, a Cherokee Group technician will recommend a variety of different UV-C air purifiers appropriately sized for your unit. To ensure full manufacturer's warranty for products, air purification systems must be installed by a licensed contractor.

To schedule an appointment with one of our air quality specialists, please call **(865) 428-6919** (then press 1) or email rnagy@thecherokeegroup.net.

BENEFITS OF UV PURIFICATION

- ▶ Reduces system maintenance
- ▶ Improves indoor air quality
- ▶ Kills airborne bacteria and viruses
- ▶ Helps prevent the spread of disease
- ▶ Helps reduce indoor odors
- ▶ Helps prevent mold and mildew growth inside the HVAC unit

FACT: Ultraviolet irradiation is a disinfection method that uses ultraviolet light to kill or inactivate microorganisms by destroying their DNA
